Precipitation probability					
00%	<05%	10%	60%	30%	10%

Forecast for Saturday 10 Jun 2023

Weather: Early morning mist and low cloud, mainly in the east, will steadily clear this morning, to leave most places fine with plenty of sunny spells. As the heat and humidity builds through today this brings the risk of some heavy and thundery downpours breaking out, with a chance of hail and localised gusty winds. The heavy showers or thunderstorms will slowly move northwards this afternoon, clearing this evening.

Chance of cloud-free hill tops above 600m: 60% at first, mainly in the east. Thereafter 100%, but occasionally dropping to 80% as cloud bases lower in any heavy showers or thunderstorms.

Low cloud and visibility: 200-300m bases at first, mainly in the east giving poor visibility in mist and hill fog. Thereafter, cloud free tops for much of today. However, bases may occasionally fall to 600-800m in heavy showers or thunderstorms. Overall very good visibilities, but suddenly dropping noticeably in showers and hill fog.

Meteorologist's View

The presence of thunderstorms is likely to give a risk of more variable and gusty winds than shown. Temperatures in some valleys, especially in the north and west, could reach 28C. With very high UV levels it is important to wear sun protection. The high temperatures, strong sunshine and increased humidity can cause exhaustion and dehydration. This afternoon rainfall from the heavy and thundery showers will lead to slippery paths and surfaces, as well as runoff.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
02:00 on Fri 09 Jun 2023	0mm	0mm	0mm

Forecast for Sunday 11 Jun 2023

Weather: Early morning mist and perhaps patchy low cloud, otherwise a fine start with plenty of sunshine before very heavy and thundery showers, with gusty winds and perhaps hail, break out through the afternoon. It will be another hot and humid day. Through the evening the showers or thunderstorms will gradually fade away.

Maximum wind: Light and variable winds for much of the day, no more than 5-10mph.

Chance of cloud-free hill tops 600m: 60% then improving 100% before temporarily decreasing 80% in showers.

Low cloud and visibility: 300m bases possible at first with poor visibilities in any low cloud. Otherwise mostly cloud free tops, but potentially falling to 600-800m bases in showers.

Temperature: **Valleys:** Plus 13 Celsius, becoming plus 28 Celsius.
At 600m: Plus 12 Celsius, becoming Plus 19 Celsius
Freezing level: Well above summits.
